

Global Quantum EcoSystem (QGES) vs Aryentollah : Yes We Can Magastna in 200 Days !

Sams Dine Sy*
March 20, 2026

Introduction

1. Quantum World Congress (QWC 26) and the equation of the 3rd term in 200 days
2. Yes We Can Make America Grant Against Nazism & Apartheid otherwise Aryentollah emerges in a Techno or even Quanti-Monarchy
3. What remains of the struggle for civil rights around the world?
4. Learning from the Culture Cloud original version

Conclusion

Introduction

The entry of the quantum into a new era is now part of the global agenda for the production of the common good, even if its contours are still unclear. The alert launched in 2023 on a possible [abdication](#) of all forces more than one to react. As an example, the United Nations is taking the initiative (June 7, 2024) by proclaiming "2025: International Year of Quantum Science and Technology ([IYQ](#)) and warning that quantum science belongs to no one, everyone is invited. Not to be outdone, several countries are also rushing to organize conferences and congresses, launch new initiatives (Japan, USA, China...).

For example, the United States is exploring its quantum future (Potomac 2022), triggering a MoonShot Analytics ([Mitre](#) 2022), securing its leadership with the [National Quantum Initiative](#) (2026). Will the Quantum World Congress/[QWC](#) open to all in 200 days (September 22-24, 2026) be able to shed light on this confusing and complex agenda? Science, ecosystem, and quantum moonshot tick all the boxes on the [scale of uncertainties and answers](#), putting Distance Science to the test in all its dimensions.

At this point, Quantum is both :

a) a challenge as a

- a threat if mediocrity, corruption or both trap the federal state in a vicious circle around counterfires, cauteries and stinging that discourage any serious initiative; or
- Opportunity if the federal state, the national quantum initiative, or both build on it to trigger the transformative moonshot towards a new federal ecosystem that can be adopted around the world.

b) an issue if its mobilization

- becomes decisive in the outcome of a world war as a weapon of mass destruction whether military, monetary, fiscal or cyber; or
- triggers a global revolution in the way the common good is produced and used;

c) Radical uncertainty if it is

- provokes a war of paradigms slowing down, or even blocking any concrete application; or
- puts several other initiatives with equivalent ambitions in competition in other countries or areas.

(d) a wild card of

- multi-secular megatrends putting an end to the explosion of inequality, the multiplication of extreme events and the ageing of the population; or
- a gigatrend confirming the end of multi-millennial stagnation.

In the immediate future, QWC 26 is confronted with the question of the 3rd term, which will inevitably be at the heart of its agenda. Addressing this urgency can nevertheless provide respite and some avenues to climb this ladder of uncertainties and responses with caution.

1. QWC 26 and the equation of the 3rd term in 200 days

Quantum World Congress/QWC (22-24 September 2026) is attracting attention when it plans to take stock of it as this American initiative displays its transformative or Moon Shot vocation in these terms: "the democratization of access to benefits must be adopted as a fundamental value so that inequalities do not become more extreme and society's trust in the quantum can be earned and maintained".

An inordinate ambition when "everywhere we see greed and sectarianism glorified, intimidation and mockery presented as strength; We see science and expertise denigrated while ignorance, dishonesty, cruelty and corruption reap priceless fruits. We see this every day. And it's hard to keep hope in those moments."

This harsh diagnosis pronounced by [B. Obama](#) calls into question all efforts to produce the common good, well beyond the fight for civil rights that the celebration of the life of the Reverend Jesse Jackson (March 6, 2026) puts back on the agenda. However, everyone must put their own house in order, if only to learn the lessons and, above all, to anticipate what could come out of this Congress now. Two decades after the proclamation of his candidacy, can he, in concert with his predecessors (Clinton, Bush) and successors (Trump, Biden), only proclaim "Yes We Can Magastna!" (Make America Great Against Nazism & Apartheid!) ? Without considering a 3rd term in the framework of any quantum ecosystem with such a vague outline.

While he was giving his speech in tribute to Jesse Jackson (March 6, 2026), a cross-speech "[Four more years!](#)" emerged from the audience. To which President Obama spontaneously replies: "No, you see, I believe in the Constitution"

Is he abdicating when he adds: "every day is marked by an attack on our democratic institutions"? Will he, like many others, cross his arm until September 22-24 to note with regret that QWC has been transformed into a weapon of mass destruction of everything that opposes the 3rd term? Even if the information has not yet been made public, a "Quantum System Tool" is already being discreetly tested, well covered by all the confusing noise emitted around AI, especially from West Asia where, more than anywhere else, peace is a capital not only because of its oil and gas resources, but above all because this space has aspired for more than 3 millennia to be at the origin of science and civilization. The only message that is likely to come out of this Congress is likely to be: "give \$1 billion to Board of Peace ([BoP](#)) if you want to live in peace in a quantum ecosystem or whatever!«

The purpose of the ongoing war in this space is now accessible. A glance at this map sheds light and allows the repository of divine science fomented more than 3 millennia ago to go back to its sources. Especially when the regime of absolute domination that it inherited in the twentieth century is faltering.

It is not just about correcting the failures identified by the US Department of Defense: 2022 National Defense Strategy) including the loss of the military attribute when "the chances of the United States participating in a major war are the highest in 80 years, and its military is not prepared to deal with it". It is also and above all a question of protecting interest groups from any risks arising from a quantum science centered on humanity as a common good. How can we ensure that the explosion of inequality since the twentieth century ceases to be a disruptive factor without affecting their rent? How to promote social mobility while facilitating identity withdrawal. How can we turn the page on the multi-millennial stagnation while preserving the status of Hegemon? A series of equations that invites us to scrutinize the mega (secular) and giga (millennial) trends that structure the evolution of the world and humanity.

2. Yes We Can Magastna otherwise Aryentollah arises in a Techno or even Quanti-Monarchy!

Including the multispatial and multi-temporal in the reflection is essential, although it is a complex and intimidating task. A few rare specialists in war and strategy have tried to do so, paving the way for prospective science when it tries to reconstruct the scenario of world evolution for at least 3 millennia. Several initiatives are trying to go back as far as possible to understand what is at the origin of all these wars between barbarians/nomads against sedentary/wise men in this gigantic and complex space now covering three continents (Africa, Asia, Europe).

EURASIA CIRCA 1000 BC : LOCATION OF THE INDO-ARYAN AND ITS NEIGHBORS.

This "Island of the World" became the target of one of the 6 satellites surrounding it (North America) and made one of its natural regions, formerly called Indo-Iranian, the new Rimland in place of Eastern Europe, which had been at the center of intra-European wars throughout the second millennium. And of which Ukraine would be only a vestige.

The theorems stated by H. J. McKinder and then N. Spykman at the heart of this typology must therefore be revisited as follows:

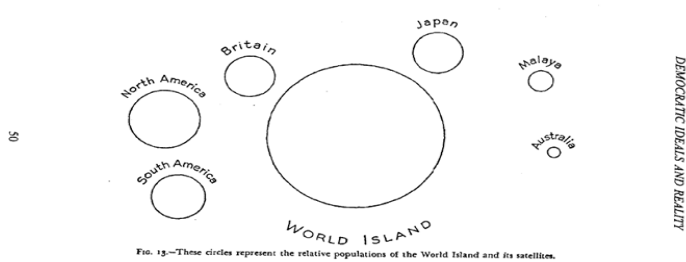

"Whoever controls Indo-Iranian, dominates the Island of the World; and the one who dominates the Island of the World makes it a quanto-archy in the service of Aryentollah "

THE ISLAND OF THE WORLD

AND ITS

6 NATURAL REGIONS

THEOREME	Whoever controls Eastern Europe dominates the Heartland; he who dominates the Heartland, dominates the Island of the World; and he who dominates the Island of the World dominates the World. (Democratic Ideals and Reality)	He who dominates the Rimland, dominates Eurasia; and whoever dominates Eurasia holds the destiny of the world. (The Geography of the Peace, New York, 1944)

3. What remains of the struggle for civil rights around the world?

The celebration of the life of the Reverend Jesse Jackson provides an opportunity to highlight his important role in the choice made for the first time since 1789 by the American people in favor of an African-American as President of the United States (November 4, 2008) and re-elected (April 3, 2012). "He laid the groundwork for my own campaign for the highest office in the land (Obama). This solemn sentence equates J. Jackson with a breaking factor since he would have paved the way for her and other black personalities.

The succession of events before the consecration of the "Yes We Can!" nevertheless invites us to revisit the theory of "wild cards", their impact on the different "family resemblances" that rub shoulders with them. While respecting the solemnity of this consecration of a promoter of peace and democracy through the struggle for civil rights embodied by Mr. L. King, whose assassination in his presence (April 4, 1968) marked him forever.

Jackson's role is all the more historic in that he ran for president twice in 1984 and 1988 in a context of political and cultural war in endless continuity in the United States, which was also described as "exceptional, not by its wealth, its size, its skyscrapers or its military power, but as the only nation in the history of mankind made up of people of all races, all religions and cultures, from the four corners of the world" (B. Obama e.a: Born in the USA; Fayard; 2021).

The election of an African-American in 2008 also calls into question the theory of predicates when the "family resemblance" that emanates from this country makes "americanus" the heir of "homo scientificus", attributing to it the regime of absolute domination imposed on the rest of the world throughout the twentieth century, classifying it as a model of liberal democracy. The theory of paradigms is also challenged when it behaves like a kleptocracy, takes refuge behind a confessional ethnolinguistic epistemology while denying so many others the right to inlay an ideological, theocratic, autocratic, plutocratic, kakistocratic nuance...

This is indeed a radical break in the attributive and classificatory logic underlying the predicate of traditional family resemblance in the exercise of political power in the United States. It remains to be seen what its true nature is: creative or destructive? Creative when it relies on political culture (politics) to promote peace in the world, confirming its central place in the long-awaited advent of "homo scientificus democraticus". Destructive according to the assessment he himself draws up two decades later. A somewhat easy way to bury everything with J. Jackson, including two presidential terms.

4. Learning from the original Culture Cloud

If all the comments provoked by the ceremony consecrate the role of the late Reverend, none of them refers to what was really decisive in this type of rupture: well before the real presidential election of 2008, a discreet virtual election having taken place within a mysterious network unique in its kind: neither technical-economic, nor social, even less politico-military, above all, not ubiquitous. Fomented within this digital microcosm at the origin of a supposedly "reproducible" "revolution", it displays such a high level of selectivity and total anonymity limiting to a limited participation (a very small number of hundreds?). Two criteria: promote a cultural work with arguments convincing enough to encourage other members to discover it; a total ban on remaining a passive consumer, thus obliging each member to regularly share a new cultural work. It doesn't matter what the field is: art, literature, science, a brilliant idea, an intellectual, natural curiosity, provided it arouses enthusiasm, gives rise to controversies that invite everyone to go deeper.

It is also a way of escaping the nauseating context resulting from the global war on terrorism, the weariness caused by the grip of the TINA, its avatar "Science Bush" and the specter of the twentieth century of barbarism.

Until the day when the idea of organizing a virtual election arises, if only to ensure the existence of a sufficiently robust political offer to put an end to it, to open a new page to the world and to humanity.

However, it was necessary to remove the major obstacle that was the neutrality of most of the members who opposed it. The argument that culture can in its political dimension be a source of peace ends up reassuring. After a period of discussion on a variety of visions available behind potential candidates, the virtual election takes place. The result destabilizes all these 2.0 voters: at the top of the votes cast, a woman and a black, without reducing them to another "family resemblance" or being convinced by their adherence to an epistemology sufficiently constructivist to promote a new federal ecosystem that is a unique source of stability, peace and solidarity as long as it remains scalable, defixator and assortative. That was all it took for the information to leak and land in the web space of a non-profit organization. Not just any team, since this "Public Allies" has maintained close ties with the two winners through their partners since 1993: one, founder and executive director, launched the Chicago version, while the other, current President, elevated it to the status of a model of national service.

The leak of the results of this revolutionary election nevertheless sounds the death knell for "Culture Cloud" given that the idea of having promoted two candidates harms the integrity and neutrality of its members. Hence the immediate decision to suspend the activities of this network at the risk of depriving most of them of any participation in another social network that is in vogue but does not meet such a high level of cultural requirements. A decision was nevertheless taken in 2007: to open CC to the public, in order to drown this network by reducing everything to the corporate culture, thus programming the obsolescence of its original version.

"Culture Cloud" was undoubtedly more decisive than any other in the election of a black man to the presidency of the United States. However, no lesson has been learned, neither by the latter, nor by his successors. None of them deigned to launch an investigation, even if only to verify the hypothesis on the real cost of the Iraq war on the occasion of a No-Fly-Zone put forward in 2003 by J. Stiglitz - Three Trillion Dollar War (Nber) - increasingly robust and confirmed, as if by chance, the year of the presidential election (2008). A diagnosis that is all the more severe because it is pronounced by a scientist and Nobel Prize winner (economics) whose independence and integrity have always been manifested, including by contributing to one of the richest "paradigm wars" (Mumbay; January 2004) devoted to "another world is possible (WSF)", "another century for development is possible ([S.D Sy](#))", in the context of "free software, free society" (R. Stallman).

However, the future President Obama had firmly opposed the Iraq war since 2003, recognized as a mistake with monumental consequences when it results in the loss of all the attributes of this country's sovereignty to the benefit of interest groups, to the point of doing it again in 2026 by organizing another No-Fly-Zone over Iran, no doubt to carry out a holdup on another \$2 trillion" saved by Doge out of the \$6.75 trillion of the federal budget; Probably to make people forget the previous one. This is how we take refuge behind the funeral of the Reverend Jesse Jackson when he "inspires us to take a more difficult path... to be heralds of change" and allows us to take refuge behind the slogans of the 2008 presidential campaign.

Another mistake that went unnoticed was the differential treatment between the three countries that openly opposed the American desire to attack Iraq because of the possession of nuclear weapons. This treatment was denounced in cynical terms by the military-industrial, academic and monetary complex (Miam) through the words of this Admiral (T. d'Arbonneau) during a Round Table dedicated to the "foundations of power" when he attacked C. Rice who was then translating the American position: "a very beautiful woman especially when she was angry and a very beautiful woman when she spoke of France. So first remark, Russia, we'll forgive it, it's in a period of transition, it's not a big deal. Germany can say what it wants, it's not a big deal. France is going to be made to pay... ». However, according to the available data, of the 13 other countries that possess or host nuclear weapons, only the United Kingdom joined the Coalition against Iraq in 2003.

Why then does this country still remain locked in a succession of traps in Libya, Syria, the Sahel, West Africa, Davos, Iran..., dragging its continent into a vicious circle while providing the USA with a cautery ([BoP](#)), a counter-fire (Iran) in 2026 just to cover up a serious affair (Epstein) and if possible preserve its status as a Hegemon at the service of lobbies? Contrary to the assertions of this Admiral, the explanation for

this relentlessness against France lies elsewhere. We must go back to the famous "little mediatized" speech delivered at [Harvard](#) on June 5, 1947 by the American Secretary of State George C. Marshall, in order to celebrate the "Birth of a peaceful Europe" provided that the paradigmatic underlying that consecrates the regime of absolute domination to the benefit of Hegemon is decoded, thus reducing the European protagonists of the 2nd World War - all defeated contrary to popular belief - into vigilantes, even if it means authorizing them to recruit/install robots in their colonies to sequester their resources in the absence of the counter-value device to the Marshall Plan.

France has nevertheless tried to circumvent this system, first by setting itself up as the winner of the war and by exercising strict control over the robots that it selects freely, unlike the United Kingdom, for example. However, it is not part of a logic of rupture like Russia, which has reduced its neighborhood to a glacis within an empire. Hence the difference in the modalities of the collapse of the empire of each of these countries: brutal for the Soviet, soft for the French. But the same treatment within the future Security Council or BoP when they are de facto excluded in 2026, which explains why none of them is in favor of the enlargement of this United Nations body to other former colonies: there is no question of sitting next to a robot, let alone giving it the right of veto. Instead of paying \$1 billion to BoP to have peace, France prefers to use them for tourism purposes in Kenya. Instead of showing up in Hormuz, prefer to take a boat ride in the South Mediterranean, which is entirely robotic.

The funeral ceremony thus provides an opportunity to [shed tears](#) when "Every day we wake up to a new attack on our democratic institutions." We live in a time when it is difficult to hope for ... Every day, we discover a new attack on our democratic institutions. A new setback for the rule of law. An attack on elementary decency... Every day, we discover things that we never thought possible... Every day, the upper echelons of power incite us to fear each other, to tear each other apart. We are told that some Americans matter more than others, and that some do not count at all. Greed and bigotry are glorified everywhere, and intimidation and mockery masquerade as force... ».

A decade of presidency has therefore been as decisive in this vicious circle as CC was in his election.

The last mistake made: not having yet learned any lessons from this virtual election via a cultural network while the world is about to switch to a new ecosystem whose contours have yet to be defined; Quantic ! say some. No, [Techno-archic](#), retort the others. The confrontation will be inevitable as long as no initiative of the same type as Culture Cloud is launched. Culture Quantum, why not. The former President is yet well placed to inspire him, if only with regard to his answers each time he was questioned about what was decisive in his choice:

"Oh, oh," he replies to B. Springsteen question. Subject: "Tell me when did you first think about running for president?" (B. Obama; Born in USA, Fayard, 2021 p. 268).

Yet, just after the virtual election, his admission "... And just a few months ago, the idea of running for office seemed completely crazy. " triggers "Yup. " at his partner's house.

Preserving behind such expressions (Oh, oh; Yep) the anonymity and neutrality of these 2.0 voters is probably legitimate. However, there is nothing to prevent us from drawing inspiration from this experience without having to thank them for anything.

Beyond his anecdotes, what can emerge from a " Culture Quantum " for example on the sidelines of the QWC 22 to 24 September 2026.

Conclusion

So many mistakes should in no way be used as an excuse to do nothing. Without avoiding pointing out the responsibility of the state model, its vulnerability to interest groups and the high level of attraction of the figure of political entrepreneur. "Stop your game..." The secret to surviving in this place (the parliament) is to understand that this is business" (A Promised Land; Fayard. P. 59). The injunction, which remained unanswered, from a lobbyist to the parliamentarian in office (2005-2008) explains the high level of fatalism that challenges all the actors of the QWC. Will they be able to address these questions head-on instead of

"selling the bear's skin before it has won it" as shown by the emphasis placed on their own rather than on the obstacles to quantum science? To be followed very closely in 200 days.
